TEHNIČKE INFORMACIJE

Polikarbonat (cilindar za vidno staklo)

| | |
|-----------------------------------|--|
| Boja: | Providno (providnost > 86%) |
| Materijal: | Termoplastični polimer |
| Radna temperatura: | do 120°C, veoma kratko za vreme čišćenja |
| tip. primena: | <ul style="list-style-type: none"> - za zaštitni cilindar za vidno staklo. - elastičan i otporan na udarce. - proziran. - otporan na neorganske i većinu organskih kiselina, oksidaciju i redukujuće agense, neutralne i kisele rastvore soli, razne vrste masti, voskova i ulja. |
| Ograničenja: | <ul style="list-style-type: none"> - nije otporan na ogrebotine. - nije otporan na vodene i alkoholne alkalne rastvore, gas amonijaka i njegove rastvore i amine. - bubri u dodiru sa benzenom, hlor-benzenom, tetralinom, acetonom, etil-acetatom, acetonitrilom i ugljenik-tetrahloridom. - nije namenjen za delove koji dolaze u dodir sa proizvodom. |
| Preporučena sredstva za čišćenje: | <ul style="list-style-type: none"> - Fa. WIGOL: 30 20 04, 30 20 00, 1085, 60 80 25 - Fa. WEBCO: „alcip“ |
